DETAILED ACTION

Claim Objections

1. Claims 1 and 18 are objected to because of the following informalities: In lines 3 and 6 of claims 1 and 18 replace "up" with --on--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Hong (U.S. Patent No. 5,869,978).

In reference to claim 1, Hong discloses in Figure 13 a circuit comprising: a first inverter (131) having an input terminal and an output terminal, the input terminal functions as an input terminal of the power-up bias circuit, wherein the input terminal of the power-on bias circuit is further in electrical communication with a core voltage input terminal (this is seen to be true because any signal input into the input terminal will have an associated voltage); a second inverter (134) having an input terminal and an output terminal, the output terminal of the second inverter functions as the output terminal for the power-up bias circuit; and a Schmitt Trigger circuit (132) having an input terminal and an output terminal, wherein the input terminal of the Schmitt Trigger circuit (132) is connected to the output terminal of the first inverter (131), the output terminal of the Schmitt Trigger circuit (132) is connected to the input terminal of the second inverter

Art Unit: 2816

(134), the first inverter (131), the second inverter (134) and the Schmitt Trigger circuit (132) are each in electrical communication with a voltage input terminal (V_{DD}) and ground (V_{SS}), wherein the voltage input terminal is an input/output voltage input terminal. The same applies to claim 18.

Allowable Subject Matter

4. Claims 4-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: Claims 4-7 would be allowable because the closest prior art of record fails to disclose a circuit as shown in Figure 4 wherein the substrates of the first and second inverter transistors have the specific connections recited in the claim in combination with the rest of the limitations of the base claims and any intervening claims.
